

HUMAN-RATED SPACEFLIGHT

LAUNCHING THE FUTURE - GEN 1 FEATURE

JOURNEY TO THE MOON – A MOOG STORY

2019 is a year to celebrate Moog's contributions to the success of the first moon landing in 1969! Moog's thrust vector control systems provided mission critical steering for all stages of the Saturn rocket that launched Apollo and the Lunar Lander. Our rocket

engines assured that the Apollo and the Lunar Lander would bring the astronauts safely to the moon and back. The contributions of our exceptional employees is what inspires our employees today to create the next generation of human rated space technologies.
